JOYA FOR SELF-SHOPPING

The Joya™ X2 device with 2D imaging technology is an easy to use pod that creates an exciting shopping experience for customers while providing lower operational costs, improved customer service and increased loyalty for retailers.

While shopping, customers can check the products they have scanned, access additional store offers, promotions and discounts, as well as an up-to-date total of their items to purchase. With Joya's 2D imaging technology customers can also redeem coupons, either printed on paper or displayed on their smartphones or other mobile devices. Customers can bag items as they shop then pay at self-payment kiosks without having to wait in the checkout line or remove their bagged items from the cart.

JOYA GENERAL PURPOSE

Joya X2 devices also double as stand-alone General Purpose mobile computers, able to support a wide variety of applications outside of Self-Shopping, such as inventory management functions, queue-busting, or other uses requiring basic interactivity with a host system.

READING CAPABILITIES

The Joya X2 device employs 2D imaging technology and can read both 1D and 2D codes from standard labels, smartphone displays and electronic shelf labels (ESL). Bar code reading is further enhanced by Datalogic's patented 'Green Spot' technology for visual good-read feedback, perfect for noisy environments.

CUSTOMIZABLE FOR YOUR ENTERPRISE OR BRAND

Datalogic's line of Joya products allows companies to combine attractive custom covers and logos to enhance the brand experience for their customers. It's easy to integrate these exciting devices into third party software applications as well as Datalogic's innovative Shopevolution™ middleware for use in Self-Shopping.
