

LINEAR DECODING

Today there is an increased trend towards 2D bar codes, however, linear bar codes are still dominant in the Automatic Data Capture industry. Long linear bar codes are commonly used in a variety of applications including Utility bills, Document Processing and Packaging. These long linear codes are a challenge for full area imagers to read because of their narrow field of view and shorter depth of field.

ENHANCED PERFORMANCE

The QuickScan QD2131 imager is the next generation of the QuickScan 2100 series and features an extra-wide field of view and an extra-long scan line which allows users to read longer bar codes from a closer distance. Additionally, the QD2131 imager has an extended reading range which exceeds the requirements of most general purpose scanning applications. The highly visible scan line makes the imager more user-friendly.

The enhanced decoding algorithm enables the QD2131 imager to capture and decode bar codes more quickly.

Elegant design details are incorporated into a smaller, lightweight enclosure without sacrificing durability.

The QD2131 imager also supports the Remote Management functions using the Host Download application.

PERFECT FOR RETAIL AND DOCUMENT PROCESSING APPLICATIONS

Ideally suited for applications at the point-of-sale (POS), the QuickScan QD2131 imager can also read loyalty cards and codes from a mobile phone screen, which a laser scanner is not capable of doing. This is very useful to meet the needs of emerging mobile marketing applications.
